

AMEY ADMANE

Pune, Maharashtra • +91-9172551410 • admaneamey92@gmail.com • <https://www.linkedin.com/in/amey-admane>

PROFESSIONAL SUMMARY

DevOps engineer with 3 years of experience in automating deployments, managing cloud infrastructure, and scaling data workflows. Proficient in Kubernetes, Docker, Terraform, and CI/CD automation. Experienced Python developer with practical knowledge of AWS, Azure, and GCP.

TECHNICAL SKILLS

Container Technologies	Docker, ECS Fargate, ECR, Kubernetes (EKS)
Cloud Platforms	AWS, Azure, GCP(Basic)
Infrastructure as Code	Terraform, CloudFormation, Helm
Programming Languages	Python, Java, SQL
Monitoring & Observation	Prometheus, Loki, Grafana, CloudWatch
Databases	PostgreSQL, MongoDB
Data Analytics	Power BI
Frameworks	SpringBoot
CI/CD	GitLab CI/CD, ArgoCD
Operating System	Linux, Windows

WORK EXPERIENCE

DevOps Engineer

07/2023 – Present

Siemens Technology - Pune, India

- Container Orchestration:** Containerized 13+ applications on AWS ECS Fargate using ECR repositories, managing the complete lifecycle from image building to production deployment.
- Kubernetes Troubleshooting:** Debugged and resolved Kubernetes cluster issues, including pod crashes, resource constraints, networking failures, and persistent volume mounting errors using kubectl, logs analysis, and cluster events.
- Scheduled Workloads:** Configured 4 AWS Fargate scheduled containers for batch processing jobs, implementing cron-based scheduling for self-executing data processing and maintenance tasks.
- Kubernetes Configuration:** Orchestrated 10+ Kubernetes resources using Helm charts, managing application deployments, services, and ingress controllers across multiple environments.
- Infrastructure as Code:** Provisioned and managed EKS clusters using Terraform, implementing VPC architecture with subnets and security groups to enforce network segmentation and access control.

- **CI/CD Pipeline Development:** Built 20+ GitLab CI pipelines with trigger-based workflows for CloudFormation deployments, orchestrating multi-stage deployments across development, staging, and production environments.
- **Component Upgrades:** Managed systematic upgrades of Kubernetes components, Helm charts, and application dependencies, ensuring compatibility and minimal downtime during version migrations.
- **Security Hardening:** Implemented container security best practices using 7 hardened images, security group configurations, and network policies to minimize attack surface.
- **API Gateway Management:** Configured Kong API Gateway for 15+ microservices routing, implementing security policies and network-level access restrictions using VPCs and security groups.
- **Observability Stack:** Implemented monitoring infrastructure using 3 services which are Prometheus, Grafana, and Loki, establishing centralized logging and metrics collection.
- **GitOps Implementation:** Configured ArgoCD and related 6+ Kubernetes add-ons for declarative GitOps-based deployments, enabling preprogrammed synchronization between Git repositories and cluster state.
- **Documentation:** Created 20+ technical documents covering deployment procedures, infrastructure architecture, troubleshooting guides, and operational runbooks for team knowledge sharing.

Software Engineer

01/2023 - 07/2023

Siemens Technology - Pune, India

- **Data Pipeline Development:** Developed 5 Python-based data converters using Poetry and AWS Lambda for transformation and validation.
- **Debugging & Troubleshooting:** Diagnosed and resolved data pipeline failures, Lambda timeout issues, and S3 event processing errors through systematic debugging and log analysis.
- **Lambda Configuration:** Configured 4 Lambda function environments, IAM roles, VPC connectivity, and CloudWatch logging for serverless data processing workflows.
- **Quality Assurance:** Established comprehensive test suites using PyTest and Unittest, improving code reliability by 25%.

EDUCATION

Bachelor of Technology: Computer Science

Shri Ramdeobaba College of Engineering and Management

CERTIFICATIONS

- Microsoft Certified: **Azure Fundamentals (AZ-900)**
- Pursuing: Kubernetes **CKAD**

AWARDS

Winner - Hackathon Hack4Mobility: Developed a scalable mobility data solution integrating cloud-based APIs and real-time monitoring.
